### Installation Manual
for model

**PL-P-4**

---

**www.goldlinecontrols.com**
IMPORTANT SAFETY INSTRUCTIONS

When using this electrical equipment, basic safety precautions should always be followed, including the following:

- **READ AND FOLLOW ALL INSTRUCTIONS**
- **WARNING:** Disconnect all AC power during installation.
- **WARNING:** Water in excess of 100 degrees Fahrenheit may be hazardous to your health.
- **WARNING:** To reduce the risk of injury, do not permit children to use this product unless they are closely supervised at all times.
- A green colored terminal marked "Earth Ground" is located inside the wiring compartment. To reduce the risk of electric shock, this terminal must be connected to the grounding means provided in the electric supply service panel with a continuous copper wire equivalent in size to the circuit conductors supplying the equipment.
- One bonding lug for US models (two for Canadian models) is provided on the external surface. To reduce the risk of electric shock, connect the local common bonding grid in the area of the swimming pool, spa, or hot tub to these terminals with an insulated or bare copper conductor not smaller than 8 AWG US / 6 AWG Canada.
- All field installed metal components such as rails, ladders, drains, or other similar hardware within 3 meters of the pool, spa or hot tub shall be bonded to the equipment grounding bus with copper conductors not smaller than 8 AWG US / 6 AWG Canada.
- **SAVE THESE INSTRUCTIONS**

**LIMITED WARRANTY**

Goldline warrants its Aqua Rite, Aqua Rite Pro, Aqua Trol, Aqua Logic and Pro Logic products (products with Goldline part numbers starting with AQ-RITE-, AQ-RT-PRO, AQ-TROL-, AQ-LOGIC-, AQL-P-, AQL-PS-, AQL-CL-, PL-P-, PL-PS-, and HP-C-2) to be free from defects in material or workmanship, under normal use and service:

For **three years** from the date of the initial system installation on private, residential swimming pools within the USA or Canada and **one year** from the date of initial system installation on commercial installations, installations outside of the USA or Canada and for any replacement parts or accessory products including Sense and Dispense™ products (products with Goldline part numbers starting with AQL-CHEM), provided they are installed in accordance with the Goldline installation instructions and specifications provided with the product. If written proof of the date of the initial system installation is not provided to Goldline, the manufacturing datecode on the Aqua Rite, Aqua Rite Pro, Aqua Trol, Aqua Logic and Pro Logic electronics unit will be the sole determinant of the date of the initial system installation.

For residential installations in USA or Canada: If a product is defective in workmanship or materials and is removed and returned freight prepaid within three (3) years after the date of the initial system installation, Goldline will, at its option, either repair or replace the defective product and return it freight prepaid.

For commercial installations, installations outside the USA and Canada, and accessory products and replacement parts: If a product is defective in workmanship or materials and is removed and returned freight prepaid within one (1) year after the date of the initial system installation, Goldline will, at its option, either repair or replace the defective product and return it freight prepaid.

Contact any Goldline dealer or contact Goldline at 61 Whitecap Drive, North Kingstown, RI 02852 for warranty service. The costs incurred in removal and/or reinstallation of the product are NOT covered under this warranty. Some states do not allow limitations on how long an implied warranty last, so the above limitation may not apply to you.

**WARRANTY EXCLUSIONS**

1. Material supplied or workmanship performed by others in process of installation.
2. Damage resulting from improper installation including installation on pools larger than the product rating.
3. Problems resulting from failure to operate the product(s) in accordance with the recommended instructions contained in product’s owner’s manual(s).
4. Problems resulting from failure to maintain pool water chemistry in accordance with the recommendations in the owners manual(s).
5. Problems resulting from tampering, accident, abuse, negligence, unauthorized repairs or alterations, fire, flood, lightning, freezing, external water, degradation of natural stone used in or immediately adjacent to a pool or spa, war or acts of God.

**DISCLAIMER.** THE EXPRESS LIMITED WARRANTY ABOVE CONSTITUTES THE ENTIRE WARRANTY OF GOLDLINE WITH RESPECT TO ITS POOL AUTOMATION AND CHLORINATION PRODUCTS AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE. IN NO EVENT SHALL GOLDLINE BE RESPONSIBLE FOR ANY CONSEQUENTIAL, SPECIAL OR INCIDENTAL DAMAGES OF ANY NATURE WHATSOEVER, INCLUDING, BUT NOT LIMITED TO, PERSONAL INJURY, PROPERTY DAMAGE, DAMAGE TO OR LOSS OF EQUIPMENT, LOST PROFITS OR REVENUE, COSTS OF RENTING REPLACEMENTS, AND OTHER ADDITIONAL EXPENSES, EVEN IF THE SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SOME STATES DO NOT ALLOW THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

NO WHOLESALER, AGENT, DEALER, CONTRACTOR OR OTHER PERSON IS AUTHORIZED TO GIVE ANY WARRANTY ON BEHALF OF GOLDLINE.

THIS WARRANTY IS VOID IF THE PRODUCT HAS BEEN ALTERED IN ANY WAY AFTER LEAVING THE FACTORY.
Heater Checkout
Follow these instructions to verify that the Pro Logic is properly controlling the heater.

1. Check that the Pro Logic is calling for the heater to turn on as indicated by the “Heater” LED being illuminated. If the “Heater” LED is illuminated, go directly to step 2; if not, then check the following:
   • The heater is enabled (Configuration Menu/Heater Config.).
   • The heater temperature setting is at least 2°F greater than the water temperature (Settings Menu / Pool Heater & Spa Heater).
   • The filter pump is running.
   • If the pool has solar heat and the solar priority feature is enabled (Configuration Menu/Solar Config) then solar must be off in order for the heater to fire. The easiest way to force solar off is to go to the Settings Menu / Pool Solar & Spa Solar and temporarily lower the temperature settings below the current water temperature.

2. Check that the heater is running. If not, then check:
   • Power is supplied to the heater.
   • The Pro Logic control output is properly connected to the heater control (see “Heater Control” wiring, page 14).
   • Some heaters also have internal switches or jumpers that have to be set correctly for remote control operation—refer to the heater manual and also “Heater Control” (page 14).
   • Heater is turned on (“Kill Switch” is in the “ON” position).
   • If a heater bypass valve is installed, check that water is flowing through the heater.
   • The heater temperature setting is set as high as possible (usually 104°F/40°C). Also note that some heat pumps actually have be set to the lowest possible temperature.

3. Once the heater is running, you can verify the “heater cooldown” feature (optional - see Configuration Menu/Heater Config) is operating properly:
   • Press the “Filter” button once (for 2 speed pumps, this may require 2 pushes of the “Filter” button).
   • The heater should turn off (“Heater” LED off) and the “Filter” LED will flash to indicated heater cooldown is active.
   • The display will periodically indicate that the filter pump is on for heater cooldown and show the minutes remaining.
   • The pump will automatically turn off at the end of the 5 minute heater cooldown period.

For more detailed instructions on control and operation of the Pro Logic system, refer to the Operation Manual.

Service Mode
Service mode disables all automatic control operation and is intended to be used when servicing the pool system. To enter service mode, push the SERVICE button once on the main unit keypad. This will initially turn all outputs off and then allow you to turn outputs on/off manually at the main display (only). In service mode, the buttons on the optional remote display/keypad and the optional spa side remote will turn outputs off, but will not turn any output on. Heater control outputs and solar control outputs are prevented from turning on if the water temperature exceeds 104°F (40°C).

Pushing the SERVICE button again will enter a timed service mode. Service operation as described above will continue for 3 hours, then automatically return to normal operation.

Push the SERVICE button once more to exit out of Service mode.

**Introduction**

**Before You Begin**

**What's Included**

Before attempting to install the Pro Logic system, check that the following components have been included in the package:

- **Pro Logic Electronics Unit**
  - 3 Temperature sensors with 15 ft. (5m) cable, hose clamp

**What's NOT Included**

Some of the additional items that you may need to complete an installation include:

- **Circuit breakers**
  - None are included with control—see page 12 and inside of door for suitable breakers

- **Wire**
  - 4-conductor cable (electronics unit to remote display/keypad)
  - Wire/conduit for 100A service from main panel to Pro Logic
  - Wire/conduit for filter pump and other high voltage loads
  - Wire for bonding

- **Miscellaneous**
  - Utility electrical outlet and weatherproof cover (for mounting on side of Pro Logic)
  - Mounting hardware (screws, etc.) for mounting Pro Logic and remote display/keypad
  - Valves (use standard Hayward, Pentair/Compool, or Jandy valves)
  - Additional valve actuators

**Accessory Products - Order Separately**

- AQL-CL Chlorination kit
- AQL-CL-25FT Chlorination kit with 25 ft cable
- AQL-CHEM ORP & pH sense kit
- AQL-CHEM2 pH dispense kit
- AQL-WW-30-W4 Wired Wall Mount Remote Display
- AQL-SS-68-x (x=W/B) Wired Spa Side 6 Function Remote Display, 50 ft cable, specify color (white or black)
- AQL-2-POD Handheld Wireless Waterproof Remote with Charging Station (AQL-2-BASE-RF required)
- AQL-2-Tx-RF-3P Wireless Table Top remote (AQL-2-BASE-RF required)
- AQL-2-SSF Wireless Spa Side Remote Control (AQL-2-BASE-RF required)
- AQL-2-BASE-RF Base Receiver
- AQL-DM Dimmer LED Dimmer Relay
- GV-20 Valve Actuator
- V&AAx Valve & Actuator (x=1P (1.5” pos. seal), -2P (2” pos. seal)

---

**6. System Startup and Checkout**

**Before Startup**

Before starting the Pro Logic for the first time, be sure that the following items have been completed:

1. Pool/spa chemicals are within the recommended levels according to the chart on page 3.
2. Pool/spa salt level is between 2700 – 3400 PPM.
3. Properly rated circuit breakers are installed in the Pro Logic subpanel.
4. All wiring is performed according to NEC and local codes.
5. The Pro Logic is properly grounded and bonded.
6. The Pro Logic is properly configured to control all desired functions.

**Program Automatic Operation**

Refer to the programming flow chart on the back cover of this manual for a listing of the available menus and the items included in each menu.

**Settings Menu**

- Heater and/or solar thermostat settings
- Chlorinator settings
- Day and Time

**Timers Menu**

- Timeclock and/or Countdown timer settings
Installation Steps

Details on each installation step are presented on the following pages:

1. Prepare the pool water (page 3)
   - General Water Chemistry
   - Salt

2. Mounting the equipment (page 6)
   - Pro Logic main unit
   - Temperature sensors
   - Remote display/keypad (optional)
   - Valve actuators (if applicable)

3. Plumbing (page 9)
   - General Pool Equipment
   - Turbo Cell
   - Flow Switch

4. Electrical Wiring (page 11)
   - Main service
   - Grounding and bonding
   - Circuit breakers
   - Pro Logic control power
   - High Voltage pool equipment
   - Low voltage wiring (temperature sensors, flow switch, etc.)

5. Pro Logic control configuration (page 21)

6. System Startup and checkout (page 30)
1. Preparing Pool/Spa Water

General Water Chemistry
Salt is required only if you are using the chlorinator features on the Pro Logic Control. If you are NOT using the chlorinator, it is recommended that you follow all of the other chemistry recommendations besides salt. Refer to the description of the Pro Logic configuration menu for information on enabling/disabling the chlorinator (see page 21).

Water Chemistry
The table below summarizes the levels that are recommended by the Association of Pool and Spa Professionals (APSP). The only special requirements for the Pro Logic are the salt level and stabilizer.

<table>
<thead>
<tr>
<th>CHEMICAL</th>
<th>IDEAL LEVELS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salt</td>
<td>2700 to 3400 ppm</td>
</tr>
<tr>
<td>Free Chlorine</td>
<td>1.0 to 3.0 ppm</td>
</tr>
<tr>
<td>pH</td>
<td>7.2 to 7.6</td>
</tr>
<tr>
<td>Cyanuric Acid (Stabilizer)</td>
<td>60 to 80 ppm (80 ppm best)</td>
</tr>
<tr>
<td>Total Alkalinity</td>
<td>80 to 120 ppm</td>
</tr>
<tr>
<td>Calcium Hardness</td>
<td>200 to 400 ppm</td>
</tr>
<tr>
<td>Metals</td>
<td>0 ppm</td>
</tr>
<tr>
<td>Saturation Index</td>
<td>-0.2 to +0.2 (0.0 beat)</td>
</tr>
</tbody>
</table>

Saturation index
The saturation index (Si) relates to the calcium and alkalinity in the water and is an indicator of the pool water “balance”. Your water is properly balanced if the Si is 0 ±0.2. If the Si is below -0.2, the water is corrosive and plaster pool walls will be dissolved into the water. If the Si is above +0.2, scaling and staining will occur. Use the chart below to determine the saturation index.

Low Speed of a 2-speed Filter Pump – the Pro Logic will operate the aux relay whenever the low speed operation of the filter pump is required. It is very important that the “2-speed” filter pump option be selected under the “Filter Config.” menu for proper operation.

Timeclock – the aux relay will turn-on and turn-off at the times set for the aux1 timeclock in the Timers menu. The AUX button can also be used to turn the output on and off.

Solar – the aux relay operates a solar booster pump which will turn on when the filter pump is running and solar heat is available and the water is less than the desired temperature setting. It is important to note that “Solar Control” must be enabled in the “Solar Config.” menu for proper operation to occur.

Super Chlorinate – if “Chlorinator” is enabled, this option allows the user to start a Super Chlorinate cycle when the aux button is pressed, rather than using the Settings menu. Note that only one button can be assigned to this function.

AUX1 Relay
This feature allows the user to select either “Standard” (default) or “Dimmer” type relay for the AUX1 output. The optional AQL-DIM dimmer kit must be installed if “Dimmer” is desired. When “Dimmer” is selected, and the AUX1 output is manually turned on, the “+” and “-” buttons adjust the level from 20% to 100% (default). The level is saved for the next time the AUX1 output is turned off and on.

AUX1 Interlock
If “Enabled”, this feature will override the function (Manual On/Off, Countdown Timer, Timeclock), selected above and turn the AUX1 off when: filter pump is off, first 3 minutes of filter pump operation (allows the pump to prime and get water flowing), when the pool/spa suction return valves are in any position other than “pool only”, or for the first 3 minutes after solar turns on (allows air in the solar panels to be purged). Interlock is not available for solar, low speed filter pump, super chlorinate or disable.

AUX1 Freeze Protection
This function protects the pool, plumbing, and equipment against freeze damage. If Freeze Protection is enabled and the AIR temperature sensor falls below the selected freeze temperature threshold, the Pro Logic will turn on the aux relay to circulate the water. IMPORTANT: this only enables operation of the AUX output during freeze – see the “Filter Pump Config.” menu to enable freeze protection for the main circulation system.

Valve3 Config.
Push to access Valve3 options
Move to previous/next configuration menu

Valve3 Function
Rotates between Timeclock (default), Solar, In-floor Cleaner, and Super Chlorinate
Move to next menu item

Valve3 Interlock
Toggle between Enabled and Disabled (default)
Move to next menu item

Valve3 Freeze
Toggle between Enabled and Disabled (default)
Move to previous/next configuration menu

Valve3 Function
Timeclock (default) – the valve turns on/off at the times set for the valve3 timeclock in the Timers menu (see Operations Manual). The VALVE3 button can also be used to turn the valve output on or off.
Super Chlorinate — if “Chlorinate” is enabled, this option allows the user to start a Super Chlorinate cycle when the Lights button is pressed, rather than using the Settings Menu. Note that only one button can be assigned to this function.

Lights Relay
This feature allows the user to select either “Standard” (default) or “Dimmer” type relay for the Lights output. The optional AQL-DIM dimmer kit must be installed if “Dimmer” is desired. When “Dimmer” is selected, and the Lights output is manually turned on, the “+” and “-” buttons adjust the level from 20% to 100% (default). The level is saved for the next time the lights are turned off or on.

Lights Interlock
If enabled, this feature will override the function (Manual On/Off, Countdown Timer, Timeclock) selected above and turn the lights relay off when: filter pump is off, first 3 minutes of filter pump operation (allows the pump to prime and get water flowing), when the pool/spa suction return valves are in any position other than “pool only”, or after the first 3 minutes after solar turn on (allows air in the solar panels to be purged). Interlock is not available for solar, low speed filter pump, super chlorinate or dimmer.

Lights Freeze Protection
This function helps protect equipment that is wired to the lights relay against freeze damage. If Freeze Protection is enabled and the AIR temperature sensor falls below the selected freeze temperature threshold, the Pro Logic will energize the lights relay. IMPORTANT: this only enables operation of the lights relay during freeze—see the “Filter Pump Config.” menu to enable freeze protection for the main circulation system.

NOTE: The configuration parameters for the Aux2 output are the same as shown below for Aux1.

- **Aux1 Config.** + to view/change
- **Aux1 Function Manual On/Off**
- **Aux1 Relay Standard** for manual on/off, countdown timer and timeclock functions
- **Aux1 Interlock Standard** for all functions except dimmer relay, solar super chlorinate, and low speed
- **Aux1 Interlock Disable**
- **Aux1 Freeze Disable**

**WARNING:** Do not use the Pro Logic to control an automatic pool cover. Swimmers may become entrapped underneath the cover.

**Aux1 Function**
- **Manual On/Off (default)—the aux relay will alternate between turning on and off when the aux button is pressed. There is no automatic control logic.**
- **Countdown Timer** — the aux relay will turn on when the AUX button is pressed and will turn off automatically after a programmed time (see Timers Menu, Operation Manual). The AUX button can also be used to turn the output off.

### Salt Level

Use the chart below to determine how much salt in pounds or (Kgs) should be added to reach the recommended levels. Use the equations on the following page (measurements are in feet/gallons and meters/liters) if pool size is unknown.

The operating salt level is between 2700-3400 PPM (parts per million) with 3200 PPM being optimal. Before adding any salt, test the salt level. This is especially important for retrofit installation to older pools where all of the chlorine added to the pool over time is ending up as salt. If the level is low, determine the number of gallons in the pool and add salt according to the chart below. A low salt level will reduce the efficiency of the sanitization and result in low chlorine production. A high salt level can cause the Pro Logic to stop chlorinating. The salt in your pool/spa is constantly recycled and the loss of salt throughout the swimming season should be minimal. This loss is due primarily to the addition of water because of splashing, backwashing, or draining (because of rain). Salt is not lost due to evaporation.

#### POUNDS and (Kg) OF SALT NEEDED FOR 3200 PPM

The pool’s chemistry must be balanced BEFORE activating the Pro Logic’s optional chlorinator function. **NOTE:** If the pool does not have new water, add metal remover and non-copper based algicide to the pool, per manufacturer’s instructions. This ensures a quick, troublefree transfer to the Pro Logic system.
Type of Salt to Use
It is important to use only sodium chloride (NaCl) salt that is greater than 99.0% pure. This can be found at most pool stores in 40-80 lb. bags labeled “for use in swimming pools”. Alternatively, use common food quality or water softener salt that is at least 99.0% pure. It is also acceptable to use water conditioning salt pellets, however, it will take longer for them to dissolve. Do not use rock salt, or salt with more than 1% of yellow prussiate of soda, salt with anti-caking additives, or iodized salt.

How to Add Salt
For new plaster pools, wait 10-14 days before adding salt to allow the plaster to cure. Turn the circulating pump on and add salt directly into the pool. Brush the salt around to speed up the dissolving process—do not allow salt to pile up on the bottom of the pool. Run the filter pump for 24 hours with the suction coming to the main drain (use pool vacuum if there is no main drain) to allow the salt to evenly disperse throughout the pool. The salt display may take 24 hours to respond to the change in salt concentration.

Always check stabilizer (cyanuric acid), when checking salt. These levels will most likely decline together. Use the chart below to determine how much stabilizer must be added to raise the level to 80 ppm.
When the filter pump is running and the heater is on: Pressing the “Filter” button once will cause the heater to turn off, but the filter pump will continue to run for heater cooldown (filter LED flashing and message on display). Pressing the filter button a second time will override the heater cooldown operation and turn the filter pump off.

Heater Extend
If “Enabled”, the filter extend logic keeps the filter pump running beyond the normal turn-off time until the pool (or spa) is heated up to the desired temperature setting (see Settings Menu). Heater extend will NOT cause the filter pump to turn on, it will only delay the turn off time when the heater is operating.

Allow Low Speed
This menu only appears if the filter is configured for 2-speed or variable speed operation. During default operation, high speed mode is used whenever the heater is on. If Allow Low Speed is enabled, low speed will be allowed even if the heater is on.

Solar
If the solar control logic is “Enabled”, several additional steps must be taken to ensure proper operation of the solar system. If the solar is operated by a valve, then the Valve3 output must be setup for solar logic (page 27). Also, the “solar” temperature sensor must be installed. This sensor is typically mounted near the collector array and is used to sense whether sufficient solar heat is available.

If solar is “Enabled”, the valve or solar pump relay will turn on when the water temperature is less than the desired temperature setting AND the solar sensor is hotter than the water. The desired temperature setting is in the “Settings Menu”. If applicable, the homeowner will be prompted to enter separate pool and spa desired temperature settings. Depending on the position of the pool/spa suction valve, the proper temperature setting will be used.

Solar Extend
If “Enabled”, the filter extend logic keeps the filter pump running beyond the normal turn-off time if solar heat is still available. When solar heat is no longer available, both the solar valve/pump and filter pump will turn off simultaneously. Solar extend will NOT cause the filter pump to turn on, it will only delay the turn off time when solar is operating.

2. Mounting the Equipment

Pro Logic Control Center
The Pro Logic is contained in a raintight enclosure that is suitable for outdoor mounting. The control must be mounted a minimum of 5 ft. (2 meters) horizontal distance from the pool/spa (or more, if local codes require). The Control Center is designed to mount vertically on a flat surface with the knockouts facing downward. Because the enclosure also acts as a heat sink (disperses heat from inside the box), it is important not to block the four sides of the control. Do not mount the Pro Logic inside a panel or tightly enclosed area.

When selecting a location, note that the standard cables supplied with the Turbo Cell, flow switch, temperature sensors, and valve actuators (if applicable) are all 15 ft. (5m) long.

Temperature Sensors
Three sensors are included with the Pro Logic. A water sensor and an air sensor must be installed at all times for proper operation. A solar sensor is required if the solar function is enabled.

Water Sensor
This sensor is used to measure the pool/spa temperature and is installed in the filtration plumbing after the filter but before either the solar or conventionally fueled heaters—refer to the plumbing overview diagram.

1. Drill a 3/8” (10mm) diameter hole in the PVC piping and remove all chips and burrs.
2. Insert sensor until O-ring collar sits flush on the hole.
3. Position hose clamp over the sensor and gently tighten until O-ring makes an adequate seal. Do not overtighten.
4. For maximum temperature accuracy, cover the sensor and 3” (6cm) of pipe on either side with insulation and white paint.

Air Sensor
Mount the air sensor outdoors. IMPORTANT: Mount the air sensor out of direct sunlight.

Solar Sensor
For solar applications, mount the sensor near the solar collector array so that it is exposed to the same sunlight as the collectors. Use additional cable (20 AWG) if necessary.

Optional AQL-CL Chlorination Kit
The AQL-CL requires the use of the AQL-CL or AQL-CL-25FT chlorination kit when using the chlorinator function. This kit contains a Turbo Cell, cell unions and flow switch. Refer to pages 9 and 18 for plumbing and wiring instructions.

Optional AQL-CHEM ORP and pH Sensing Kit
The AQL-CHEM is an ORP and pH sensing kit for the Pro Logic. When used with the AQL-CL, the Pro Logic senses the pool’s ORP and pH levels and generates the correct amount of chlorine to keep your pool properly sanitized. Wiring and plumbing requirements for the AQL-CHEM should be considered before installing the Pro Logic. Refer to the AQL-CHEM manual for specific installation information.

Optional AQL-CHEM CO2 Dispensing Kit
The AQL-CHEM2 is a CO2 dispensing device that connects directly to the Pro Logic. When used with an AQL-CHEM, the Pro Logic will sense the pool’s pH level and automatically dispense the correct amount of CO2 to control the pool’s pH to the desired level. Wiring and plumbing requirements for the AQL-CHEM2 should be considered before installing the Pro Logic. Refer to the AQL-CHEM2 manual for specific installation information.
Optional Remote Controls
Goldline offers a variety of wired and wireless remote control options for the Pro Logic. Each model gives you the ability to control your pool’s functions from a remote location, away from the Control Center.

Wired Remote Controls
Up to 3 wired remote controls can be installed. See page 19 for wiring information.

AQL-WW-P-4
The AQL-WW-P-4 display/keypad must be mounted indoors or in a weather protected area (rain should never touch the unit). The display/keypad is designed to mount onto a standard electrical utility box (same box as a single light switch, ideal for new construction) or can be mounted directly onto any wall surface. When selecting a location, note that the wire to the Pro Logic main unit must be less than 500’ long. Refer to the remote’s installation instructions as well as the steps below:
1. Remove display/keypad baseplate from the cover by lifting up on the cover at the lower end of the keypad. See diagram below.

   ![Remote Keypad diagram]

2. Screw the baseplate in the desired position (screws supplied by installer).
3. See “Electrical Wiring” (page 19) for instructions on running the cable from the Pro Logic main unit to the remote display/keypad.

AQL-SS-6B-x (x=W, G or B for White, Gray or Black)
The AQL-SS-6B is a double insulated, waterproof device which is intended for installation at the water's edge. The remote control comes with an attached 150’ cable and is typically installed at the tile-line of the spa wall, or in the deck, within arm’s reach of a pool/spa occupant. Refer to the AQL-SS-6B installation manual for specific mounting and wiring information.

Wireless Remote Controls
Note that the Pro Logic is compatible with AQL2 wireless remote controls only. A single AQL2-BASE-RF Base Station must be installed on the Pro Logic in order to use any of the Goldline wireless remote controls. With the Base Station installed, there is no limit on the number of wireless remotes that can used. The maximum distance between the wireless remotes and the base station on the Pro Logic main control unit is 400 feet (120m) line of sight or 200 feet (60m) through walls, etc. If in doubt about the distance, test operation before installing the remote. All wireless models require the user to run the “Teach Wireless” routine in the Settings Menu. This information can be found in the Pro Logic Operation Manual and the owner’s manual of each remote.

AQL2-Tx-RF-P-4
The AQL2-Tx-RF-P-4 is a portable battery operated remote control designed to be used in a weather protected area (rain should never hit the unit). This remote comes with a wall mounted power supply for recharging the built-in batteries.

Lowest Speed
This is the lowest speed that the variable speed pump is allowed to run at. It is used as the lower limit in the Low Speed Settings Menu. Set lowest speed from 10% (default) to 50%.

Highest Speed
This is the highest speed that the variable speed pump is allowed to run at. It is used as the upper limit in the High Speed Settings Menu. Also, this is the speed that the pump will run at during the first 3 minutes of operation anytime the pump has been off for more than 30 seconds. Set highest speed from 20% to 100% (default).

Freeze Protection
Freeze protection is used to protect the pool and plumbed equipment against freeze damage. If freeze protection is enabled and the AIR temperature sensor falls below the freeze threshold (see below), the Pro Logic will turn on the filter pump to circulate the water. If “Pool and Spa” is selected in the Pool/Spa sub-menu (see page 22), the valves will also alternate between the pool and spa every 30 minutes and the filter pump will turn off while the valves are turning. The chlorinator will not operate if freeze protection is the only reason the pump is running.

Freeze Protection Speed
This menu only appears if freeze protection is enabled and the pump is configured for 2-speed or variable speed pump operation. This is the speed that the pump will run at during freeze protection operation. Select high (default) or low speed operation.

Freeze Protection Temperature
Select the temperature to be used for freeze protection. Temperature is adjustable from 33°F - 42°F (1ºC - 6ºC). 38ºF (3ºC) is default. This threshold will be used for all outputs that have freeze protection enabled.
The AQL2-SS-RF and AQL2-POD are waterproof portable remote controls that are designed to be used in and around the pool/spa area. These units float and can be left in the water for easy access.

**Optional Base Station**

The AQL2-BASE-RF optional base station must be installed if any wireless remote control is used. To install the base station, remove the knockout on the upper left side of the Pro Logic main control unit, insert the base station, and then tighten the nut from the inside. Also refer to the Base Station manual and the diagram on page 19.

**Optional Valve Actuators**

For optional actuators used with the Pro Logic—note that the internal cams in the actuator may also have to be adjusted depending on the way the actuator is mounted on the valve and the desired valve action.

---

**Filter Operation**

If “Spa Spillover” is selected, the Pro Logic will automatically switch the pool/spa suction and return valves to “spillover” at the start of the programmed pool filtering time period or when the super-chlorinate function is turned on. The valves will remain in this position for the remainder of the super-chlorinate period. This option is usually preferable because both the pool and spa water will be filtered and sanitized.

If “Pool Only” is selected, then the Pro Logic will switch the pool/spa valves to the “pool only” position at the start of the programmed pool filtering time period or when the super-chlorinate function is turned on. This may be desirable on some systems with in-floor cleaners because it allows the cleaner to operate all the time the pool is being filtered and/or the super chlorinate is running.

**V1=Aux1, V2=Aux2**

This menu appears only if the Pool/Spa Setup is “Pool Only” or “Spa Only”. When enabled, Valve 1 (return) will follow the Aux1 output and Valve 2 (suction) will follow the Aux2 output. When disabled (default), the return and suction pool/spa valves function normally.

**Filter Off Valve Change**

This menu appears only if Pool/Spa setup is set to “Pool and Spa - Std”. When enabled (default), the filter pump will shut off for 35 seconds whenever the Pool/Spa valves are turning. The pump will NOT shut off when a heater is in Heater Cool Down mode.

---

**Filter Config.**

★ Push to access pump options

★ Move to previous/next configuration menu

★ Rotates between 1-speed (default), 2-speed and variable speed options

★ Move to previous/next configuration menu

★ Adjust the lowest speed desired for variable speed operation

★ Move to previous/next configuration menu

★ Adjust the highest speed desired for variable speed operation

★ Move to previous/next configuration menu

★ Toggle between Enabled (default) and Disabled Freeze Protection

★ Move to previous/next configuration menu

★ Toggle between high speed (default) and low speed

★ Move to previous/next configuration menu

★ Adjust the desired freeze protection temperature (33°F - 42°F)

★ Move to previous/next configuration menu

**Filter Pump**

For 2-speed pumps: When a 2-speed pump is configured, one of the AUX relays must also be configured to control the low speed motor winding on the pump. Refer to the appropriate sections in the Installation manual for specific information regarding the control logic for 2-speed and variable speed pump operation.

For the Hayward Tristar variable speed pump: The Filter relay is used to supply input power to the VSC pump control. The relay will be on when the filter pump output is on. When the filter pump output is off, the relay will be off. On, off and speed is controlled by commands sent to the pump.
3. Plumbing

Pool/Spa system configuration

These systems use a single filter pump and filter. Pool or spa operation is controlled by two 3-way valves (suction and return). Refer to the diagram below.

Some important notes regarding the Pro Logic control of Standard Pool/Spa systems:

In Pool/Spa Config., select:

1. The Pro Logic can be programmed to accommodate spa spillover, if desired.
2. A conventional heater (gas or heat pump) and solar can be used to heat both the pool and the spa.
3. If the chlorinator cell is plumbed prior to the pool/spa return valve, then both the pool and the spa can be chlorinated.
4. The water sensor should be installed prior to any heater or solar and will display either the pool or the spa temperature, depending on the current operation of the pool. The temperature will only be displayed when the filter pump is running.
5. If any water feature or pressure side cleaner boost pumps are used, be sure to enable the “interlock” feature (see “Configuration Menu” for details) to ensure that the pumps operate only when the filter pump is on and the system is in the “pool only” operating mode.
6. The plumbing diagram above is intended to be used as a general guideline and is not a complete plumbing schematic for the pool.

Chemistry Config. Wizard + to enter

Press to access Chemistry Config. Wizard

Move to previous/next menu item

Chemistry Configuration Wizard

Requires use of the optional AQL-CHEM Sensing Kit. Following the steps of the Chemistry Config. Wizard will set up the AQL-CHEM to sense ORP and pH levels and, if the AQL-CL chlorination kit is used, can configure the Pro Logic to generate the correct amount of chlorine to properly sanitize the pool. Refer to the AQL-CHEM manual for more detailed information.

Pool/Spa Setup + to view/change

Press to access Pool/Spa options

Move to previous/next configuration menu

Pool and Spa

Move to next menu item

Pool - CountDown

Adjust time setting (Manual On/Off, 0:05, 0:10, 0:15..., (default is 4:00))

Move to next menu item

Spa Spillover Enabled

Toggle between Enabled and Disabled (default)

Move to next menu item or previous/next configuration menu

Pool Only or Spa Only

Change: Disabled

Move to previous/next configuration menu

POOL/SPA suction

Move to previous/next configuration menu

Pool/Spa Setup

If “Pool Only” or “Spa Only” are selected, then the pool/spa valves are not needed and pushing the POOL/SPA button on the display/keypad will have no effect. If “Pool and Spa” is selected, then the pool/spa suction and return valve actuators should be connected to the Pro Logic. Pressing the POOL/SPA button on the display/keypad will allow the homeowner to alternate between pool and spa operation. For more information on “Pool and Spa”, refer to the Plumbing section on pages 8.

Spa CountDown

This menu will appear only if Pool/Spa Setup is set to “Pool and Spa”. This setting is the time, after you manually switch the Pool/Spa valves to “Spa Only”, until the Pro Logic automatically returns the valves to their previous positions. It is programmed in increments of 5 minutes, from “Manual On/Off” (0 minutes) to “21:00” (21 hours). The filter is forced on during this time period.

Spa Spillover

When spa spillover is “Enabled” and “Pool and Spa”, the homeowner will be able to rotate through “Pool Only” (both suction and return valves switched to pool), “Spa Only” (both suction and return valves switched to spa) and “Spillover” (suction valve switched to pool and return valve switched to spa) by successive presses of the “Pool/Spa button.”
5. Configuration Setup

After plumbing and wiring are complete, the Pro Logic MUST BE CONFIGURED before attempting to operate. Configuration information is entered at the keypad and “tells” the Pro Logic what equipment is connected and how each should be controlled.

Accessing the Configuration Menus

Configuring the Pro Logic requires that you navigate through the Configuration Menu and input various information. For more detailed information about using the Pro Logic menu system, refer to the Operation Manual.

To access the Configuration Menu

- Press repeatedly until “Configuration Menu” is displayed
- Press BOTH buttons SIMULTANEOUSLY for 5 seconds to unlock

Configuration Menu Items

Each item needs to be programmed and may contain additional sub-menu items. Refer to the following pages for information on programming.

Chlor. Config. + to view/change

Chlorinator Enabled

Display Salt

Cell Type T-CELL-15

Chlorinator

If the chlorinator is enabled (requires the use of the AQL-CL chlorination kit), then the cell and flow switch must also be installed and the Pro Logic will automatically chlorinate both the pool and spa according to the desired output setting (see Settings Menu in the Operation manual). If disabled (default), then neither the cell nor flow switch need to be installed and all displays relating to the chlorinator will be suppressed.

When the chlorinator is enabled, the Pro Logic will automatically detect and control any Aqua Rite(s) that is installed in the system (see page 20).

Display

Allows for the display of salt (default) or mineral values.

Cell Type Selection

The Cell Type Menu appears after “Display Salt/Minerals” in the Chlorinator Configuration Menu. The options are T-CELL-5 or T-CELL-15 (default). Make the proper selection based on the electrolytic cell that is used in your system. For pools up to 20,000 gallons, the T-CELL-5 is typically used. The T-CELL-15 is for pools up to 40,000 gallons.

7. The air sensor must be installed if the freeze protection feature is enabled for the filter, valves or aux outputs or if the chlorinator is enabled.

**Turbo Cell (supplied with AQL-CL chlorination kit)**

The Turbo Cell (used for chlorine generation) should be plumbed AFTER the filter and heater. If installed on a pool/spa combination system, the cell should be plumbed BEFORE the pool/spa return valve in order to allow proper chlorination of both the pool and the spa. Refer to plumbing diagram below:

The cell may be mounted vertically or horizontally, and water can move in either direction through the cell. Install using the 2” unions provided. Tighten unions BY HAND for a watertight seal. For systems with 1½” plumbing use adaptors (provided by installer).

**Flow Switch (supplied with AQL-CL chlorination kit)**

The flow switch must be plumbed in the same section of plumbing as the Turbo Cell. The flow switch is a safety device that ensures that water is flowing through the cell before the Pro Logic starts to generate chlorine. Failure to properly install the flow switch can result in explosive gases accumulating in the pool plumbing system.

- IMPORTANT: There must be at least a 12” (30cm) straight pipe run before (upstream) the flow switch. If the switch is plumbed after the cell, the cell can be counted as the 12” (30cm) of straight pipe.

- IMPORTANT: To ensure proper operation, verify that the arrow on the flow switch points in the direction of water flow.
4. Electrical Wiring

The Pro Logic Control Center requires both high and low voltage connections. Low voltage connections will be made to actuators, sensors, remote keypad, etc. High voltage connections will be made to pumps, lights, etc., as well as providing direct input power to the Control Center. Always:

- Ensure that Power is disconnected prior to doing any wiring
- Follow all local and NEC (CEC if applicable) codes
- Use copper conductors only

Main Service (Power to the Circuit Breaker Subpanel)
The Pro Logic circuit breaker subpanel is rated for 100A service. Run properly rated conductors (L1, L2, N, and ground) from the primary house electrical panel to the main power connections on the Pro Logic circuit breaker base. The connection at the main house panel should be to a 240V AC circuit breaker rated at 100A maximum.

Grounding and Bonding
Connect a ground wire from the primary electrical panel to the Pro Logic ground bus bar. Also ground each piece of high voltage (120 or 240VAC) equipment that is connected to the Pro Logic control relays or circuit breakers. The Pro Logic should also be connected to the pool bonding system by an 8AWG (6AWG for Canada) wire. A lug for bonding (2 for Canada) is provided on the outside/bottom of the Pro Logic enclosure.

Circuit Breaker Installation and Wiring
Circuit breakers are to be supplied by the installer. Refer to the circuit breaker chart on the following page for a list of suitable circuit breakers that can be used. Follow the code and the circuit breaker manufacturer’s rating requirements regarding the size and temperature rating for wiring. Note that some pool equipment may be required to be connected to ground fault circuit breakers—check local and NEC (CEC) codes.

AQL-CHEM ORP and pH Sensing Kit
Plug in the connector from the AQL-CHEM into the “AQL-CHEM” connector on the main PCB in the Pro Logic control unit.

Flow Switch
Only applicable if the chlorinator function is enabled. The flow switch cable plugs into the Pro Logic Control Center at the position shown in the diagram on page 11. Ensure that the connector catch “snaps” in order to provide a reliable connection.

Turbo Cell
Only applicable if the chlorinator function is enabled. The Turbo Cell should be plugged in after the Pro Logic cover panel is put back in place. Refer to page 11 for the location of the connector.

Goldline Aqua Rite Chlorinator
The Pro Logic can control one or more Goldline Aqua Rite chlorinators when additional sanitizing capacity is required. A 4 wire connection is used to communicate to the Aqua Rite and can be wired up to 500’ apart. Any outdoor rated 4 conductor cable can be used. Refer to the wiring diagrams below for proper wiring connection to the Aqua Rite. NOTE: There must be only 1 “primary” unit. All other Aqua Rite units must be configured as “secondary”.

NOTE: Primary/Secondary jumper is located underneath small circuit board.
Remote Display/Keypad

The Pro Logic main unit can connect to a maximum of 3 remote wired display/keypads (ordered separately).

Use four conductor cable (typically phone cable) to connect the wired remote display/keypad with the Pro Logic Control Center as shown below. The maximum wiring distance is 500ft. (160m). Note that the terminals on both the Pro Logic main unit and the wired remote display/keypad are numbered: Connect 1 to 1, 2 to 2, etc. Refer to diagram below.

If multiple remote display/keypads are installed: Never connect more than 2 wires to any terminal block. Two remotes can be wired back to the Pro Logic main unit or the second display/keypad (and third, if applicable) can be “daisy chained” with one display/keypad wired to the next. The maximum wire run from the Pro Logic main unit to the furthest remote display/keypad is 500 ft (160m).

Base Station

Plug in the pigtail connector from the wireless base station into the “wireless” connector on the main PCB in the Pro Logic control unit.

General Purpose Outlet

If desired, a duplex receptacle with weatherproof cover (supplied by installer) may be installed in the knockouts on the lower right side of the Pro Logic enclosure. Per code, the receptacle should be a GFCI type. Alternatively, connect a standard receptacle to a GFCB.

Pro Logic Control Power

The Pro Logic requires 120VAC, 2A power to operate the control logic circuits and the chlorinator. This power should be connected to one of the circuit breakers.

⚠️ WARNING: 120VAC only (permanent damage if connected to 240V)
High Voltage (120/240V) Pool Equipment
All Pro Logic relays are double pole (they make/break both “legs” of 240V circuits) and are rated at 3HP/30A at 240V (1 ½HP/30A at 120V). Refer to the diagram below for typical relay wiring.

**WARNING:** Do not use the Pro Logic to control an automatic pool cover. Swimmers may become entrapped underneath the cover.

**Two speed filter pump:** Requires 2 relays (FILTER plus one of the AUX relays) for proper operation of both speeds. **IMPORTANT:** Be sure to follow the wiring diagram below AND to configure the control logic according to the instructions on page 23.

**Lights:** A ground fault circuit breaker must be used to supply power for high voltage pool/spa lighting. Low voltage lights will require an external transformer. For lighting systems that have both a light source and color wheel, connect the light source to the “Lights” relay and then connect the color wheel to one of the AUX outputs.

**Hayward Variable Speed Filter Pump:** Proper installation of the Hayward Tristar Variable Speed Control (VSC) includes high voltage input wiring, communication wiring, and menu configuration/settings. Refer to the following diagram for proper input wiring to the VSC. Wiring from the 220V breaker must connect through the Pro Logic’s Filter relay. The Filter relay is used to supply input power to the VSC pump control. The relay will be on when the filter pump output is on. When the filter pump output is off, use four conductor cable (typically phone cable) for communications connection between the VSC and the Pro Logic. The maximum wiring distance is 500 feet (160 meters). Note that the terminals on both the VSC interface board and the Pro Logic main board are numbered. The terminal connections should be matched between both terminal blocks (connect 1 to 1, 2 to 2, etc.). The communications cable should be routed through the knockout hole on the left side of the VSC enclosure, and a watertight fitting should be used to keep water and debris out of the opening. The communications cable should also be routed away from the Pro Logic and VSC power connections if possible.

**VSC Pump Address Setting**
For proper communications, a pump address must be set for each VSC used in the system. For single pump systems, the VSC address should be set to 001. When using Dual Equipment, the Pool Filter pump should be set to 001 and the Spa Filter pump should be set to 002. Refer to the TriStar Pump Owner’s Manual (IS3220VSC) and Hayward document IS3220VSCAQLL for specific instructions on setting the pump address.

**Temperature Sensors**
The Pro Logic utilizes 10K ohm thermistor type sensors. Three sensors (water temperature, air temperature and solar temperature) are included. If the Pro Logic is being used to control a solar heating system, the solar sensor is required. The sensors are provided with a 15 ft. cable. See page 6 and the diagram below for installation information.
Raypak RP2100 Pool/Spa Heater

1. Turn power off to heater.
2. Push the mode button to “spa” mode.
3. Set the temperature to the maximum.
4. Push the mode button to “OFF”.
5. Lastly, plug the prewired connector in the P7 position on the board.

IMPORTANT: The heater will display “OFF” when it is being remotely controlled by the Pro Logic. Some homeowners see the “OFF” display and, thinking this is a mistake, change the mode to “POOL” or “SPA” which then disables the remote control by the Pro Logic. To prevent this: Remove the heater touchpad connector (P5) which will disable the touchpad.

STA-RITE Heater

1. Turn power off to heater.
2. Remove upper jacket and open the control box.
3. Remove the jumper for the “fireman’s switch.
4. Wire to the Pro Logic using wire rated for 105°C minimum.

Goldline pH Dispense Pigtail: The Goldline pH Dispense Pigtail is included with the AQL-CHEM and is used to provide a plug-in receptacle for the AQL-CHEM2 solenoid valve's linecord or other line voltage pH related dispensing device (peristaltic pumps, solenoid valves, etc.) that use a typical 110 V AC male plug. The Pigtail wires directly to one of the Pro Logic relays. The particular relay used for the Pigtail will depend on the Pro Logic model and the auxiliary outputs that are already being used. For PS-8 or PS-16 models, use any available Aux or Lights relay. For PS-4 or P-4 models, an additional relay (included with the AQL-CHEM) must be installed for pH control. Refer to the AQL-CHEM manual for instructions on how to install the additional relay. After determining which relay to use, wire the Pigtail according to the diagram below. Note that the Pigtail must be powered by a GFCB.

Low Voltage Wiring

Valve Actuators

The Pro Logic can control up to three automatic valve actuators. Two of the valve outputs are dedicated to the pool/spa suction (Valve2) and return (Valve1) valves. Valve3 is for general purpose use (solar, water feature, in-floor cleaner, etc.).

For installations with solar heating, Goldline offers the AQ-SOL-KIT-xx solar kit that contains a valve, actuator, and extra temperature sensor. The “xx” indicates the valve type from the 3 choices below:
- 1P 1.5” Positive Seal
- 2P 2” Positive Seal

The Pro Logic is compatible with standard valve actuators manufactured by Hayward, Pentair/Compool, and Jandy. See diagram on page 11 for the location of valve connectors.

Heater Control

The Pro Logic provides a set of low voltage dry contacts that can be connected to most gas heaters or heat pumps with 24V control circuits. Refer to the diagram below for a generic connection. The manuals supplied with most heaters also include specific wiring instructions for connecting the heater to an external control (usually identified as “2-wire” remote control). For millivolt or line voltage heaters, contact Goldline Tech support, 908-355-7995. Refer to the diagrams and the information on the following pages for more details on the connection to several popular heaters.

Drawing is for digital heater. If heater is a millivolt (analog), run red wires from Fireman’s Switch to heater relay.
**Generic Heaters**

1. Wire heater to 120/240V power source per the instructions in the heater manual. The Pro Logic does NOT control the power going to the heater.
2. Wire the Pro Logic dry contact heater output per the diagram below. Many internal parts of the heater can get very hot—see the heater manufacturer’s recommendations on the minimum temperature rating for wires. If no guidance is given, use 105°C rated wire.
3. Set any ON/OFF switch on the heater to ON.
4. Set the thermostat(s) on the heater to the maximum (hottest) setting.

**Laars Heaters**

1. Turn power off to heater.
2. Remove factory jumper from terminal block.
3. Wire Pro Logic to the heater as shown.
4. Ensure toggle switch is in the ON position.
5. Set heater thermostats to maximum position.

**Hayward Heaters**

Refer to the instructions in the heater manual for “2-wire Remote Thermostat” operation under “Remote Control Connections” and the diagram below.

1. Turn off power to heater.
2. Wire Pro Logic to terminals 1 & 2 (see diagram).
3. Leave jumper attached to terminals 4 & 5.
4. Move “BYPASS” dipswitch on heater circuit board to “ON” position (up).
5. Turn heater power back on.
6. Switch heater to either “Pool” or “Spa” (it doesn’t make any difference which is selected, the Pro Logic will take control).
7. Heater display should be “bO” (for “bypass On”).
8. Heater will fire whenever Pro Logic requests (when Pro Logic “Heater” LED is illuminated).

**Pentair/Purex/MiniMax**

1. Turn power off to heater.
2. Remove factory installed jumper from the “Ext Switch” connector.
3. Wire the Pro Logic to the “Ext Switch” connector as shown below.
4. The wires to the Pro Logic must be separated from any line voltage wires. Failure to follow these instructions may cause erratic operation of the heater.
5. Set the Power (Thermostat Select) switch to either “Pool” or “Spa”.
6. Set the “Pool” and “Spa” thermostats to their maximum settings.
Generic Heaters
1. Wire heater to 120/240V power source per the instructions in the heater manual. The Pro Logic does NOT control the power going to the heater.
2. Wire the Pro Logic dry contact heater output per the diagram below. Many internal parts of the heater can get very hot--see the heater manufacturer’s recommendations on the minimum temperature rating for wires. If no guidance is given, use 105°C rated wire.
3. Set any ON/OFF switch on the heater to ON.
4. Set the thermostat(s) on the heater to the maximum (hottest) setting.

Laars Heaters
1. Turn power off to heater.
2. Remove factory jumper from terminal block.
3. Wire Pro Logic to the heater as shown.
4. Ensure toggle switch is in the ON position.
5. Set heater thermostats to maximum position.

Hayward Heaters
Refer to the instructions in the heater manual for “2-wire Remote Thermostat” operation under “Remote Control Connections” and the diagram below.
1. Turn off power to heater.
2. Wire Pro Logic to terminals 1 & 2 (see diagram).
3. Leave jumper attached to terminals 4 & 5.
4. Move “BYPASS” dipswitch on heater circuit board to “ON” position (up).
5. Turn heater power back on.
6. Switch heater to either “Pool” or “Spa” (it doesn’t make any difference which is selected, the Pro Logic will take control).
7. Heater display should be “bO” (for “bypass On”).
8. Heater will fire whenever Pro Logic requests (when Pro Logic “Heater” LED is illuminated).

Pentair/Purex/MiniMax
1. Turn power off to heater.
2. Remove factory installed jumper from the “Ext Switch” connector.
3. Wire the Pro Logic to the “Ext Switch” connector as shown below.
4. The wires to the Pro Logic must be separated from any line voltage wires. Failure to follow these instructions may cause erratic operation of the heater.
5. Set the Power (Thermostat Select) switch to either “Pool” or “Spa”.
6. Set the “Pool” and “Spa” thermostats to their maximum settings.
**Raypak RP2100 Pool/Spa Heater**

1. Turn power off to heater.
2. Push the mode button to “spa” mode.
3. Set the temperature to the maximum.
4. Push the mode button to “OFF”.
5. Lastly, plug the prewired connector in the P7 position on the board.

**IMPORTANT:** The relay will be off. Note that when the filter pump relay is off (power off to the VSC), the Pro Logic will not display errors or diagnostics for the pump. The filter pump relay must be on for diagnostic function.

**Goldline pH Dispense Pigtail:** The Goldline pH Dispense Pigtail is included with the AQL-CHEM and is used to provide a plug-in receptacle for the AQL-CHEM2 solenoid valve's linecord or other line voltage pH related dispensing device (peristaltic pumps, solenoid valves, etc.) that use a typical 110 V AC male plug. The Pigtail wires directly to one of the Pro Logic relays. The particular relay used for the Pigtail will depend on the Pro Logic model and the auxiliary outputs that are already being used. For PS-8 or PS-16 models, use any available Aux or Lights relay. For PS-4 or P-4 models, an additional relay (included with the AQL-CHEM) must be installed for pH control. Refer to the AQL-CHEM manual for instructions on how to install the additional relay. After determining which relay to use, wire the Pigtail according to the diagram below. Note that the Pigtail must be powered by a GFCB.

**Low Voltage Wiring**

**Valve Actuators**

The Pro Logic can control up to three automatic valve actuators. Two of the valve outputs are dedicated to the pool/spa suction (Valve2) and return (Valve1) valves. Valve3 is for general purpose use (solar, water feature, in-floor cleaner, etc.).

For installations with solar heating, Goldline offers the AQ-SOL-KIT-xx solar kit that contains a valve, actuator, and extra temperature sensor. The “xx” indicates the valve type from the 3 choices below:
- 1P 1.5” Positive Seal
- 2P 2” Positive Seal

The Pro Logic is compatible with standard valve actuators manufactured by Hayward, Pentair/Compool, and Jandy. See diagram on page 11 for the location of valve connectors.

**Heater Control**

The Pro Logic provides a set of low voltage dry contacts that can be connected to most gas heaters or heat pumps with 24V control circuits. Refer to the diagram below for a generic connection. The manuals supplied with most heaters also include specific wiring instructions for connecting the heater to an external control (usually identified as “2-wire” remote control). For millivolt or line voltage heaters, contact Goldline Tech support, 908-355-7995. Refer to the diagrams and the information on the following pages for more details on the connection to several popular heaters.
High Voltage (120/240V) Pool Equipment
All Pro Logic relays are double pole (they make/break both “legs” of 240V circuits) and are rated at 3HP/30A at 240V (1½HP/30A at 120V). Refer to the diagram below for typical relay wiring.

WARNING: Do not use the Pro Logic to control an automatic pool cover. Swimmers may become entrapped underneath the cover.

Two speed filter pump: Requires 2 relays (FILTER plus one of the AUX relays) for proper operation of both speeds. IMPORTANT: Be sure to follow the wiring diagram below AND to configure the control logic according to the instructions on page 23.

Lights: A ground fault circuit breaker must be used to supply power for high voltage pool/spa lighting. Low voltage lights will require an external transformer. For lighting systems that have both a light source and color wheel, connect the light source to the “Lights” relay and then connect the color wheel to one of the AUX outputs.

Hayward Variable Speed Filter Pump: Proper installation of the Hayward Tristar Variable Speed Control (VSC) includes high voltage input wiring, communication wiring, and menu configuration/settings. Refer to the following diagram for proper input wiring to the VSC. Wiring from the 220V breaker must connect through the Pro Logic’s Filter relay. The Filter relay is used to supply input power to the VSC pump control. The relay will be on when the filter pump output is on. When the filter pump output is off,

Hayward Variable Speed Filter Pump: Refer to the diagram below for proper low voltage communication wiring between the Pro Logic and the Hayward Tristar Variable Speed Control (VSC).

Use four conductor cable (typically phone cable) for communications connection between the VSC and the Pro Logic. The maximum wiring distance is 500 feet (160 meters). Note that the terminals on both the VSC interface board and the Pro Logic main board are numbered. The terminal connections should be matched between both terminal blocks (connect 1 to 1, 2 to 2, etc.). The communications cable should be routed through the knockout hole on the left side of the VSC enclosure, and a watertight fitting should be used to keep water and debris out of the opening. The communications cable should also be routed away from the Pro Logic and VSC power connections if possible.

VSC Pump Address Setting
For proper communications, a pump address must be set for each VSC used in the system. For single pump systems, the VSC address should be set to 001. When using Dual Equipment, the Pool Filter pump should be set to 001 and the Spa Filter pump should be set to 002. Refer to the TriStar Pump Owner’s Manual (IS3220VSC) and Hayward document IS3220VSCAQLL for specific instructions on setting the pump address.

Temperature Sensors
The Pro Logic utilizes 10K ohm thermistor type sensors. Three sensors (water temperature, air temperature and solar temperature) are included. If the Pro Logic is being used to control a solar heating system, the solar sensor is required. The sensors are provided with a 15 ft. cable. See page 6 and the diagram below for installation information.
**Remote Display/Keypad**
The Pro Logic main unit can connect to a maximum of 3 remote wired display/keypads (ordered separately).

Use four conductor cable (typically phone cable) to connect the wired remote display/keypad with the Pro Logic Control Center as shown below. The maximum wiring distance is 500ft. (160m). Note that the terminals on both the Pro Logic main unit and the wired remote display/keypad are numbered: Connect 1 to 1, 2 to 2, etc. Refer to diagram below.

If multiple remote display/keypads are installed: Never connect more than 2 wires to any terminal block. Two remotes can be wired back to the Pro Logic main unit or the second display/keypad (and third, if applicable) can be “daisy chained” with one display/keypad wired to the next. The maximum wire run from the Pro Logic main unit to the furthest remote display/keypad is 500 ft (160m).

**Base Station**
Plug in the pigtail connector from the wireless base station into the “wireless” connector on the main PCB in the Pro Logic control unit.

**General Purpose Outlet**
If desired, a duplex receptacle with weatherproof cover (supplied by installer) may be installed in the knockouts on the lower right side of the Pro Logic enclosure. Per code, the receptacle should be a GFCI type. Alternatively, connect a standard receptacle to a GFCB.

**Pro Logic Control Power**
The Pro Logic requires 120VAC, 2A power to operate the control logic circuits and the chlorinator. This power should be connected to one of the circuit breakers.

⚠️ **WARNING:** 120VAC only (permanent damage if connected to 240V)
4. Electrical Wiring

The Pro Logic Control Center requires both high and low voltage connections. Low voltage connections will be made to actuators, sensors, remote keypad, etc. High voltage connections will be made to pumps, lights, etc., as well as providing direct input power to the Control Center. Always:

- Ensure that Power is disconnected prior to doing any wiring
- Follow all local and NEC (CEC if applicable) codes
- Use copper conductors only

Main Service (Power to the Circuit Breaker Subpanel)
The Pro Logic circuit breaker subpanel is rated for 100A service. Run properly rated conductors (L1, L2, N, and ground) from the primary house electrical panel to the main power connections on the Pro Logic circuit breaker base. The connection at the main house panel should be to a 240V AC circuit breaker rated at 100A maximum.

Grounding and Bonding
Connect a ground wire from the primary electrical panel to the Pro Logic ground bus bar. Also ground each piece of high voltage (120 or 240VAC) equipment that is connected to the Pro Logic control relays or circuit breakers. The Pro Logic should also be connected to the pool bonding system by an 8AWG (6AWG for Canada) wire. A lug for bonding (2 for Canada) is provided on the outside/bottom of the Pro Logic enclosure.

Circuit Breaker Installation and Wiring
Circuit breakers are to be supplied by the installer. Refer to the circuit breaker chart on the following page for a list of suitable circuit breakers that can be used. Follow the code and the circuit breaker manufacturer’s rating requirements regarding the size and temperature rating for wiring. Note that some pool equipment may be required to be connected to ground fault circuit breakers—check local and NEC (CEC) codes.

AQL-CHEM ORP and pH Sensing Kit
Plug in the connector from the AQL-CHEM into the “AQL-CHEM” connector on the main PCB in the Pro Logic control unit.

Flow Switch
Only applicable if the chlorinator function is enabled. The flow switch cable plugs into the Pro Logic Control Center at the position shown in the diagram on page 11. Ensure that the connector catch “snaps” in order to provide a reliable connection.

Turbo Cell
Only applicable if the chlorinator function is enabled. The Turbo Cell should be plugged in after the Pro Logic cover panel is put back in place. Refer to page 11 for the location of the connector.

Goldline Aqua Rite Chlorinator
The Pro Logic can control one or more Goldline Aqua Rite chlorinators when additional sanitizing capacity is required. A 4 wire connection is used to communicate to the Aqua Rite and can be wired up to 500’ apart. Any outdoor rated 4 conductor cable can be used. Refer to the wiring diagrams below for proper wiring connection to the Aqua Rite. NOTE: There must be only 1 "primary" unit. All other Aqua Rite units must be configured as "secondary".
5. Configuration Setup

After plumbing and wiring are complete, the Pro Logic MUST BE CONFIGURED before attempting to operate. Configuration information is entered at the keypad and "tells" the Pro Logic what equipment is connected and how each should be controlled.

Accessing the Configuration Menus

Configuring the Pro Logic requires that you navigate through the Configuration Menu and input various information. For more detailed information about using the Pro Logic menu system, refer to the Operation Manual.

**To access the Configuration Menu**

- Configuration Menu-Unlocked
- Configuration Menu-Locked

Press repeatedly until "Configuration Menu" is displayed
Press BOTH buttons SIMULTANEOUSLY for 5 seconds to unlock

Move to configuration menu items

Press BOTH buttons SIMULTANEOUSLY for 5 seconds to unlock

NOTE: The configuration menu automatically "locks" after 2 minutes of no buttons being pressed to prevent unauthorized people from changing the control logic inadvertently and possibly damaging the pool equipment or causing a "call back" to fix the configuration.

**Configuration Menu Items**

Each item needs to be programmed and may contain additional sub-menu items. Refer to the following pages for information on programming.

- Chlor: Config.
  Push to access Chlorinator option
  Move to next configuration menu

- Chlorinator Enabled
  Toggle between Chlorinator Enabled (default) and Disabled
  Move to next menu item

- Display Salt
  Toggle between Display Salt (default) and Minerals
  Move to previous/next configuration menu

- Cell Type T-CELL-15
  Toggle between T-CELL-5 and T-CELL-15
  Move to next menu item

- Chlorinator
  If the chlorinator is enabled (requires the use of the AQL-CL chlorination kit), then the cell and flow switch must also be installed and the Pro Logic will automatically chlorinate both the pool and spa according to the desired output setting (see Settings Menu in the Operation manual). If disabled (default), then neither the cell nor flow switch need to be installed and all displays relating to the chlorinator will be suppressed.

  When the chlorinator is enabled, the Pro Logic will automatically detect and control any Aqua Rite(s) that is installed in the system (see page 20).

- Display
  Allows for the display of salt (default) or mineral values.

- Cell Type Selection
  The Cell Type Menu appears after “Display Salt/Minerals” in the Chlorinator Configuration Menu. The options are T-CELL-5 or T-CELL-15 (default). Make the proper selection based on the electrolytic cell that is used in your system. For pools up to 20,000 gallons, the T-CELL-5 is typically used. The T-CELL-15 is for pools up to 40,000 gallons.

7. The air sensor must be installed if the freeze protection feature is enabled for the filter, valves or aux outputs or if the chlorinator is enabled.

**Turbo Cell** *(supplied with AQL-CL chlorination kit)*

The Turbo Cell (used for chlorine generation) should be plumbed AFTER the filter and heater. If installed on a pool/spa combination system, the cell should be plumbed BEFORE the pool/spa return valve in order to allow proper chlorination of both the pool and the spa. Refer to plumbing diagram below:

The cell may be mounted vertically or horizontally, and water can move in either direction through the cell. Install using the 2” unions provided. Tighten unions **BY HAND** for a watertight seal. For systems with 1½” plumbing use adaptors (provided by installer).

**Flow Switch** *(supplied with AQL-CL chlorination kit)*

The flow switch must be plumbed in the same section of plumbing as the Turbo Cell. The flow switch is a safety device that ensures that water is flowing through the cell before the Pro Logic starts to generate chlorine. Failure to properly install the flow switch can result in explosive gases accumulating in the pool plumbing system.

**IMPORTANT:** There must be at least a 12” (30cm) straight pipe run before (upstream) the flow switch. If the switch is plumbed after the cell, the cell can be counted as the 12” (30cm) of straight pipe.

**IMPORTANT:** To ensure proper operation, verify that the arrow on the flow switch points in the direction of water flow.
3. Plumbing

Pool/Spa system configuration

These systems use a single filter pump and filter. Pool or spa operation is controlled by two 3-way valves (suction and return). Refer to the diagram below.

Some important notes regarding the Pro Logic control of Standard Pool/Spa systems:

In Pool/Spa Config., select:

1. The Pro Logic can be programmed to accommodate spa spillover, if desired.
2. A conventional heater (gas or heat pump) and solar can be used to heat both the pool and the spa.
3. If the chlorinator cell is plumbed prior to the pool/spa return valve, then both the pool and the spa can be chlorinated.
4. The water sensor should be installed prior to any heater or solar and will display either the pool or the spa temperature, depending on the current operation of the pool. The temperature will only be displayed when the filter pump is running.
5. If any water feature or pressure side cleaner boost pumps are used, be sure to enable the “interlock” feature (see “Configuration Menu” for details) to ensure that the pumps operate only when the filter pump is on and the system is in the “pool only” operating mode.
6. The plumbing diagram above is intended to be used as a general guideline and is not a complete plumbing schematic for the pool.

Chemistry Config. Wizard + to enter

Chemistry Configuration Wizard

Requires use of the optional AQL-CHEM Sensing Kit. Following the steps of the Chemistry Config. Wizard will set up the AQL-CHEM to sense ORP and pH levels and, if the AQCL CL chlorination kit is used, can configure the Pro Logic to generate the correct amount of chlorine to properly sanitize the pool. Refer to the AQL-CHEM manual for more detailed information.

Pool/Spa Setup

If “Pool Only” or “Spa Only” are selected, then the pool/spa valves are not needed and pushing the POOL/SPA button on the display/keypad will have no effect. If “Pool and Spa” is selected, then the pool/spa suction and return valve actuators should be connected to the Pro Logic. Pressing the POOL/SPA button on the display/keypad will allow the homeowner to alternate between pool and spa operation. For more information on “Pool and Spa”, refer to the Plumbing section on pages 8.

Spa CountOn

This menu will appear only if Pool/Spa Setup is set to “Pool and Spa”. This setting is the time, after you manually switch the Pool/Spa valves to “Spa Only”, until the Pro Logic automatically returns the valves to their previous positions. It is programmed in increments of 5 minutes, from “Manual On/Off” (0 minutes) to “21:00” (21 hours). The filter is forced on during this time period.

Spa Spillover

When spa spillover is “Enabled” and “Pool and Spa”, the homeowner will be able to rotate through “Pool Only” (both suction and return valves switched to pool), “Spa Only” (both suction and return valves switched to spa) and “Spillover” (suction valve switched to pool and return valve switched to spa) by successive presses of the “Pool/Spa button.”
Filter Operation
If “Spa Spillover” is selected, the Pro Logic will automatically switch the pool/spa suction and return valves to “spillover” at the start of the programmed pool filtering time period or when the super-chlorinate function is turned on. The valves will remain in this position for the remainder of the super-chlorinate period. This option is usually preferable because both the pool and spa water will be filtered and sanitized.

If “Pool Only” is selected, then the Pro Logic will switch the pool/spa valves to the “pool only” position at the start of the programmed pool filtering time period or when the super-chlorinate function is turned on. This may be desirable on some systems with in-floor cleaners because it allows the cleaner to operate all the time the pool is being filtered and/or the super chlorinate is running.

V1=Aux1, V2=Aux2
This menu appears only if the Pool/Spa Setup is “Pool Only” or “Spa Only”. When enabled, Valve 1 (return) will follow the Aux1 output and Valve 2 (suction) will follow the Aux2 output. When disabled (default), the return and suction pool/spa valves function normally.

Filter Off Valve Change
This menu appears only if Pool/Spa setup is set to “Pool and Spa - Std”. When enabled (default), the filter pump will shut off for 35 seconds whenever the Pool/Spa valves are turning. The pump will NOT shut off when a heater is in Heater Cooldown mode.

Filter Pump
For 2-speed pumps: When a 2-speed pump is configured, one of the AUX relays must also be configured to control the low speed motor winding on the pump. Refer to the appropriate sections in the Installation manual for specific information regarding the control logic for 2-speed and variable speed pump operation.

For the Hayward Tristar variable speed pump: The Filter relay is used to supply input power to the VSC pump control. The relay will be on when the filter pump output is on. When the filter pump output is off, the relay will be off. On/off and speed is controlled by commands sent to the pump.

AQL2-SS-RF, AQL2-POD
The AQL2-SS-RF and AQL2-POD are waterproof portable remote controls that are designed to be used in and around the pool/spa area. These units float and can be left in the water for easy access.

Optional Base Station
The AQL2-BASE-RF optional base station must be installed if any wireless remote control is used. To install the base station, remove the knockout on the upper left side of the Pro Logic main control unit, insert the base station, and then tighten the nut from the inside. Also refer to the Base Station manual and the diagram on page 19.

Optional Valve Actuators
For optional actuators used with the Pro Logic—note that the internal cams in the actuator may also have to be adjusted depending on the way the actuator is mounted on the valve and the desired valve action.
Optional Remote Controls
Goldline offers a variety of wired and wireless remote control options for the Pro Logic. Each model gives you the ability to control your pool’s functions from a remote location, away from the Control Center.

Wired Remote Controls
Up to 3 wired remote controls can be installed. See page 19 for wiring information.

AQL-WW-P-4
The AQL-WW-P-4 display/keypad must be mounted indoors or in a weather protected area (rain should never touch the unit). The display/keypad is designed to mount onto a standard electrical utility box (same box as a single light switch, ideal for new construction) or can be mounted directly onto any wall surface. When selecting a location, note that the wire to the Pro Logic main unit must be less than 500’ long. Refer to the remote’s installation instructions as well as the steps below:

1. Remove display/keypad baseplate from the cover by lifting up on the cover at the lower end of the keypad. See diagram below.

2. Screw the baseplate in the desired position (screws supplied by installer).

3. See “Electrical Wiring” (page 19) for instructions on running the cable from the Pro Logic main unit to the remote display/keypad.

AQL-SS-6B-x (x=W, G or B for White, Gray or Black)
The AQL-SS-6B is a double insulated, waterproof device which is intended for installation at the water's edge. The remote control comes with an attached 150’ cable and is typically installed at the tile-line of the spa wall, or in the deck, within arm’s reach of a pool/spa occupant. Refer to the AQL-SS-6B installation manual for specific mounting and wiring information.

Wireless Remote Controls
Note that the Pro Logic is compatible with AQL2 wireless remote controls only. A single AQL2-BASE-RF Base Station must be installed on the Pro Logic in order to use any of the Goldline wireless remote controls. With the Base Station installed, there is no limit on the number of wireless remotes that can used. The maximum distance between the wireless remotes and the base station on the Pro Logic main control unit is 400 feet (120m) line of sight or 200 feet (60m) through walls, etc. If in doubt about the distance, test operation before installing the remote. All wireless models require the user to run the “Teach Wireless” routine in the Settings Menu. This information can be found in the Pro Logic Operation Manual and the owner’s manual of each remote.

AQL2-Tx-RF-P-4
The AQL2-Tx-RF-P-4 is a portable battery operated remote control designed to be used in a weather protected area (rain should never hit the unit). This remote comes with a wall mounted power supply for recharging the built-in batteries.
When the filter pump is running and the heater is on: Pressing the “Filter” button once will cause the heater to turn off, but the filter pump will continue to run for heater cooldown (filter LED flashing and message on display). Pushing the filter button a second time will override the heater cooldown operation and turn the filter pump off.

**Heater Extend**
If “Enabled”, the filter extend logic keeps the filter pump running beyond the normal turn-off time until the pool (or spa) is heated up to the desired temperature setting (see Settings Menu). Heater extend will NOT cause the filter pump to turn on, it will only delay the turn off time when the heater is operating.

**Allow Low Speed**
This menu only appears if the filter is configured for 2-speed or variable speed operation. During default operation, high speed mode is used whenever the heater is on. If Allow Low Speed is enabled, low speed will be allowed even if the heater is on.

**Solar Config.**
- Push to access solar options
- Move to previous/next configuration menu
- Toggle between Enabled and Disabled (default)
- Move to next menu item or previous/next configuration menu
- Move to previous/next configuration menu

**Solar Priority**
- Toggle between Enabled and Disabled (default)
- Move to next menu item
- Move to next menu item

**Solar Extend**
- Toggle between Enabled and Disabled (default)
- Move to next menu item or previous/next configuration menu

**Solar**
If the control logic is “Enabled”, several additional steps must be taken to ensure proper operation of the solar system. If the solar is operated by a valve, then the Valve3 output must be set up for solar logic (page 27). Also, the “solar” temperature sensor must be installed. This sensor is typically mounted near the collector array and is used to sense whether sufficient solar heat is available.

If solar is “Enabled”, the valve or solar pump relay will turn on when the water temperature is less than the desired temperature setting AND the solar sensor is hotter than the water. The valve or solar pump relay will turn on for a minimum of 5 ft. (2 meters) horizontal distance from the pool/spa (or more, if local codes require). The Control Center is designed to mount vertically on a flat surface with the knockouts facing downward. Because the enclosure also acts as a heat sink (disperses heat from inside the box), it is important not to block the four sides of the control. Do not mount the Pro Logic inside a panel or tightly enclosed area.

When selecting a location, note that the standard cables supplied with the Turbo Cell, flow switch, temperature sensors, and valve actuators (if applicable) are all 15 ft. (5m) long.

**Temperature Sensors**
Three sensors are included with the Pro Logic. A water sensor and an air sensor must be installed at all times for proper operation. A solar sensor is required if the solar function is enabled.

**Water Sensor**
This sensor is used to measure the pool/spa temperature and is installed in the filtration plumbing after the filter but before either the solar or conventionally fueled heaters—refer to the plumbing overview diagram.

1. Drill a 3/8” (10mm) diameter hole in the PVC piping and remove all chips and burrs.
2. Insert sensor until O-ring collar sits flush on the hole.
3. Position hose clamp over the sensor and gently tighten until O-ring makes an adequate seal. Do not overtighten.
4. For maximum temperature accuracy, cover the sensor and 3” (6cm) of pipe on either side with insulation and white paint.

**Air Sensor**
Mount the air sensor outdoors. **IMPORTANT: Mount the air sensor out of direct sunlight.**

**Solar Sensor**
For solar applications, mount the sensor near the solar collector array so that it is exposed to the same sunlight as the collectors. Use additional cable (20 AWG) if necessary.

**Optional AQL-CL Chlorination Kit**
The AQL-CL requires the use of the AQL-CL or AQL-CL-25FT chlorination kit when using the chlorinator function. This kit contains a Turbo Cell, cell unions and flow switch. Refer to pages 9 and 18 for plumbing and wiring instructions.

**Optional AQL-CHEM ORP and pH Sensing Kit**
The AQL-CHEM is an ORP and pH sensing kit for the Pro Logic. When used with the AQL-CL, the Pro Logic senses the pool’s ORP and pH levels and generates the correct amount of chlorine to keep your pool properly sanitized. Wiring and plumbing requirements for the AQL-CHEM should be considered before installing the Pro Logic. Refer to the AQL-CHEM manual for specific installation information.

**Optional AQL-CHEM2 CO2 Dispensing Kit**
The AQL-CHEM2 is a CO2 dispensing device that connects directly to the Pro Logic. When used with an AQL-CHEM, the Pro Logic will sense the pool’s pH level and automatically dispense the correct amount of CO2 to control the pool’s pH to the desired level. Wiring and plumbing requirements for the AQL-CHEM2 should be considered before installing the Pro Logic. Refer to the AQL-CHEM2 manual for specific installation information.
### Pool Sizing Formula

</tr>
</tbody>
</table>

**Type of Salt to Use**

It is important to use only sodium chloride (NaCl) salt that is greater than 99.0% pure. This can be found at most pool stores in 40-80 lb. bags labeled “for use in swimming pools”. Alternatively, use common food quality or water softener salt that is at least 99.0% pure. It is also acceptable to use water conditioning salt pellets, however, it will take longer for them to dissolve. Do not use rock salt, or salt with more than 1% of yellow prussiate of soda, salt with anti-caking additives, or iodized salt.

**How to Add Salt**

For new plaster pools, wait 10-14 days before adding salt to allow the plaster to cure. Turn the circulating pump on and add salt directly into the pool. Brush the salt around to speed up the dissolving process—do not allow salt to pile up on the bottom of the pool. Run the filter pump for 24 hours with the suction coming from the main drain (use pool vacuum if there is no main drain) to allow the salt to evenly disperse throughout the pool. The salt display may take 24 hours to respond to the change in salt concentration. Always check stabilizer (cyanuric acid), when checking salt. These levels will most likely decline together. Use the chart below to determine how much stabilizer must be added to raise the level to 80 ppm.

<table>

**Solar Prioritization**

If both “Solar Control” and “Heater Control” are enabled, the Solar Prioritization feature will keep the conventional heater off whenever solar heat is available. This provides the most cost effective way of heating the pool. When solar heat is not available, the conventional heater will operate normally.

**Allow Low Speed**

This menu only appears if the pool filter is configured for 2-speed or variable speed operation. During default operation, high speed mode is used whenever the solar heater is on. If Allow Low Speed is enabled, low speed pump operation will be allowed during solar heating except for the first 3 minutes after solar heat turns on.

---

### Lights Config.

- **Manual On/Off**: The lights relay will turn on when the LIGHTS button is pressed. The lights relay will turn off automatically after a programmed time (see Timers Menu in Operation Manual). The LIGHTS button can also be used to turn the output off.

- **Countdown Timer**: The lights relay will turn on when the LIGHTS button is pressed. The lights relay will turn off automatically after a programmed time (see Timers Menu in Operation Manual). The LIGHTS button can also be used to turn the output off.

- **Low Speed**: The lights relay will turn on when the LIGHTS button is pressed. The lights relay will turn off automatically after a programmed time (see Timers Menu in Operation Manual). The LIGHTS button can also be used to turn the output off.

- **Lights Interlock**: The lights relay will turn on when the LIGHTS button is pressed. The lights relay will turn off automatically after a programmed time (see Timers Menu in Operation Manual). The LIGHTS button can also be used to turn the output off.

- **Lights Freeze**: The lights relay will turn on when the LIGHTS button is pressed. The lights relay will turn off automatically after a programmed time (see Timers Menu in Operation Manual). The LIGHTS button can also be used to turn the output off.
Super Chlorinate – if “Chlorinate” is enabled, this option allows the user to start a Super Chlorinate cycle when the Lights button is pressed, rather than using the Settings Menu. Note that only one button can be assigned to this function.

**Lights Relay**

This feature allows the user to select either “Standard” (default) or “Dimmer” type relay for the Lights output. The optional AQL-DIM dimmer kit must be installed if “Dimmer” is desired. When “Dimmer” is selected, and the Lights output is manually turned on, the “+” and “-” buttons adjust the level from 20% to 100% (default). The level is saved for the next time the lights are turned on/off.

**Lights Interlock**

If enabled, this feature will override the function (Manual On/Off, Countdown Timer, Timeclock) selected above and turn the lights relay off when: filter pump is off, first 3 minutes of filter pump operation (allows the pump to prime and get water flowing), when the pool/spa suction return valves are in any position other than “pool only”, or for the first 3 minutes after solar turns on (allows air in the solar panels to be purged). Interlock is not available for solar, low speed filter pump, super chlorinate or dimmer.

**Lights Freeze Protection**

This function helps protect equipment that is wired to the lights relay against freeze damage. If Freeze Protection is enabled and the A/R temperature sensor falls below the selected freeze temperature threshold, the Pro Logic will energize the lights relay. IMPORTANT: this only enables operation of the lights relay during freeze—see the “Filter Pump Config.” menu to enable freeze protection for the main circulation system.

**NOTE:** The configuration parameters for the Aux2 output are the same as shown below for Aux1.

| Aux1 Config. + to view/change | Push to access Aux options |
| Aux1 Function Manual On/Off | Move to previous/next configuration menu |
| Aux1 Interlock Standard | Rotate between Standard (default) and Dimmer |
| Aux1 Relay Standard | Move to next menu item |
| for all functions except dimmer relay, solar, and low speed | Toggle between Standard (default) and Dimmer |
| Aux1 Interlock Disable | Move to previous/next configuration menu |
| for all functions except dimmer relay, solar, and low speed | Toggle between Enabled and Disabled (default) Aux Interlock |
| Aux1 Freeze Disable | Move to next menu item |

**WARNING:** Do not use the Pro Logic to control an automatic pool cover. Swimmers may become entrapped underneath the cover.

**AUX1 Function**

*Manual On/Off (default)—the aux relay will alternate between turning on and off when the aux button is pressed. There is no automatic control logic.*

*Countdown Timer—the aux relay will turn on when the AUX button is pressed and then will turn off automatically after a programmed time (see Timers Menu, Operation Manual). The AUX button can also be used to turn the output off.

---

The pool’s chemistry must be balanced BEFORE activating the Pro Logic’s optional chlorinator function. **NOTE:** If the pool does not have new water, add metal remover and non-copper based algicide to the pool, per manufacturer’s instructions. This ensures a quick, troublefree transfer to the Pro Logic system.

**Salt (When using optional chlorinator function - requires AQL-CL chlorination kit)**

**Salt Level**

Use the chart below to determine how much salt in pounds or (Kgs) should be added to reach the recommended levels. Use the equations on the following page (measurements are in feet/gallons and meters/liters) if pool size is unknown.

The operating salt level is between 2700-3400 PPM (parts per million) with 3200 PPM being optimal. Before adding any salt, test the salt level. This is especially important for retrofit installation to older pools where all of the chlorine added to the pool over time is ending up as salt. If the level is low, determine the number of gallons in the pool and add salt according to the chart below. A low salt level will reduce the efficiency of the sanitization and result in low chlorine production. A high salt level can cause the Pro Logic to stop chlorinating. The salt in your pool/spa is constantly recycled and the loss of salt throughout the swimming season should be minimal. This loss is due primarily to the addition of water because of splash, backwashing, or draining (because of rain). Salt is not lost due to evaporation.

1. Preparing Pool/Spa Water

General Water Chemistry

Salt is required only if you are using the chlorinator features on the Pro Logic Control. If you are NOT using the chlorinator, it is recommended that you follow all of the other chemistry recommendations besides salt. Refer to the description of the Pro Logic configuration menu for information on enabling/disabling the chlorinator (see page 21).

Water Chemistry

The table below summarizes the levels that are recommended by the Association of Pool and Spa Professionals (APSP). The only special requirements for the Pro Logic are the salt level and stabilizer.

### Chemical Levels

<table>
<thead>
<tr>
<th>Component</th>
<th>Ideal Levels</th>
</tr>
</thead>
<tbody>
<tr>
<td>Salt</td>
<td>2700 to 3400 ppm</td>
</tr>
<tr>
<td>Free Chlorine</td>
<td>1.0 to 3.0 ppm</td>
</tr>
<tr>
<td>pH</td>
<td>7.2 to 7.6</td>
</tr>
<tr>
<td>Cyanuric Acid (Stabilizer)</td>
<td>60 to 80 ppm (80 ppm best)</td>
</tr>
<tr>
<td>Total Alkalinity</td>
<td>80 to 120 ppm</td>
</tr>
<tr>
<td>Calcium Hardness</td>
<td>200 to 400 ppm</td>
</tr>
<tr>
<td>Metals</td>
<td>0 ppm</td>
</tr>
<tr>
<td>Saturation Index</td>
<td>-0.2 to +0.2 (0.0 beat)</td>
</tr>
</tbody>
</table>

### Saturation Index

The saturation index (Si) relates to the calcium and alkalinity in the water and is an indicator of the pool water “balance”. Your water is properly balanced if the Si is 0 ±0.2. If the Si is below -0.2, the water is corrosive and plaster pool walls will be dissolved into the water. If the Si is above +0.2, scaling and staining will occur. Use the chart below to determine the saturation index.

\[
Si = pH + Ti + Ci + Ai - 12.1
\]

### How to use:

1. Measure pool pH, temperature, calcium hardness, and total alkalinity. Use the chart above to determine Ti, Ci, and Ai from your measurements. Insert values of pH, Ti, Ci and Ai into the above equation. If Si equals 2 or more, scaling and staining may occur. If Si equals -2 or less corrosion or irritation may occur.

### Table

<table>

<td>400</td>
<td>2.7</td>
</tr>
</tbody>
</table>

### IMPORTANT:

- **Corrosive** - scaling and staining will occur
- **OK** - water is properly balanced
- **Scaling** - scaling and staining will occur

Low Speed of a 2-speed Filter Pump – the Pro Logic will operate the aux relay whenever the low speed operation of the filter pump is required. It is very important that the “2-speed” filter pump option be selected under the “Filter Config.” menu for proper operation.

**Timeclock** – the aux relay will turn-on and turn-off at the times set for the aux1 timeclock in the Timers Menu. The AUX button can also be used to turn the output on and off.

**Solar** – the aux relay operates a solar booster pump which will turn on when the filter pump is running and solar heat is available and the water is less than the desired temperature setting. It is important to note that “Solar Control” must be enabled in the “Solar Config.” menu for proper operation to occur.

**Super Chlorinate** – if “Chlorinator” is enabled, this option allows the user to start a Super Chlorinate cycle when the aux button is pressed, rather than using the Settings Menu. Note that only one button can be assigned to this function.

### Valve3 Options

- **Valve3 Config.** – allow you to access Valve3 options.
- **Valve3 Function Solar** – rotate between Timeclock (default), Solar, In-floor Cleaner, and Super Chlorinate.
- **Valve3 Interlock** – toggle between Enabled and Disabled (default) Valve3 Interlock.
- **Valve3 Freeze** – toggle between Enabled and Disabled (default) Valve3 Freeze.

### Valve3 Function

- **Timeclock** (default) – the valve turns on/off at the times set for the valve3 timeclock in the Timers Menu (see Operations Manual). The VALVE3 button can also be used to turn the valve output on or off.
Installation Steps
Details on each installation step are presented on the following pages:

1. Prepare the pool water (page 3)
   General Water Chemistry
   Salt

2. Mounting the equipment (page 6)
   Pro Logic main unit
   Temperature sensors
   Remote display/keypad (optional)
   Valve actuators (if applicable)

3. Plumbing (page 9)
   General Pool Equipment
   Turbo Cell
   Flow Switch

4. Electrical Wiring (page 11)
   Main service
   Grounding and bonding
   Circuit breakers
   Pro Logic control power
   High Voltage pool equipment
   Low voltage wiring (temperature sensors, flow switch, etc.)

5. Pro Logic control configuration (page 21)

6. System Startup and checkout (page 30)
Introduction

Before You Begin

What's Included
Before attempting to install the Pro Logic system, check that the following components have been included in the package:

Pro Logic Electronics Unit
- (3) Temperature sensors with 15 ft. (5m) cable, hose clamp

What's NOT Included
Some of the additional items that you may need to complete an installation include:

Circuit breakers
- None are included with control—see page 12 and inside of door for suitable breakers

Wire
- 4-conductor cable (electronics unit to remote display/keypad)
- Wire/conduit for 100A service from main panel to Pro Logic
- Wire/conduit for filter pump and other high voltage loads
- Wire for bonding

Miscellaneous
- Utility electrical outlet and weatherproof cover (for mounting on side of Pro Logic)
- Mounting hardware (screws, etc.) for mounting Pro Logic and remote display/keypad
- Valves (use standard Hayward, Pentair/Compool, or Jandy valves)
- Additional valve actuators

Accessory Products - Order Separately
- AQL-CL Chlorination kit
- AQL-CL-25FT Chlorination kit with 25ft cable
- AQL-CHEM ORP & pH sense kit
- AQL-CHEM2 pH dispense kit
- AQL-WW-P-4 Wired Wall Mount Remote Display
- AQL-SS-68-x (x=W/B) Wired Spa Side 6 Function Remote Display, 150ft cable, specify color (white or black)
- AQL2-POD Handheld Wireless Waterproof Remote with Charging Station (AQL2-BASE-RF required)
- AQL2-SS-RF Wireless Table Top Remote (AQL2-BASE-RF required)
- AQL2-BASE-RF Base Receiver
- AQL-DIM Light Dimmer Relay
- Gv-V-A Valve Actuator
- V+Axx Valve & Actuator (xe=1P (1.5” pos. seal), -2P (2” pos. seal)

All Timeclocks
- 7-day

This selection affects ALL of the timeclock logic in the Pro Logic. If “7-day” is selected, each timeclock will have one set of turn-on/turn-off settings that operate every day of the week. If “Weekend/Weekdays” option is selected then the user can enter one set of turn-on/turn-off times for the weekend (fixed as Saturday/Sunday) and another set of turn-on/turn-off times for weekdays (Monday through Friday).

Time Format
- 12 hour AM/PM

Units
- ºF and PPM

Reset Config. to Default
- + to proceed

Before Startup
Before starting the Pro Logic for the first time, be sure that the following items have been completed:

1. Pool/spa chemicals are within the recommended levels according to the chart on page 3.
2. Pool/spa salt level is between 2700 – 3400 PPM.
3. Properly rated circuit breakers are installed in the Pro Logic subpanel.
4. All wiring is performed according to NEC and local codes.
5. The Pro Logic is properly grounded and bonded.
6. The Pro Logic is properly configured to control all desired functions.

Program Automatic Operation
Refer to the programming flow chart on the back cover of this manual for a listing of the available menus and the items included in each menu.

Settings Menu
- Heater and/or solar thermostat settings
- Chlorinator settings
- Day and Time

Timers Menu
- Timeclock and/or Countdown timer settings
Heater Checkout

Follow these instructions to verify that the Pro Logic is properly controlling the heater.

1. Check that the Pro Logic is calling for the heater to turn on as indicated by the “Heater” LED being illuminated. If the “Heater” LED is illuminated, go directly to step 2; if not, then check the following:
   - The heater is enabled (Configuration Menu/Heater Config.).
   - The heater temperature setting is at least 2°F greater than the water temperature (Settings Menu/Pool Heater & Spa Heater).
   - The filter pump is running.
   - If the pool has solar heat and the solar priority feature is enabled (Configuration Menu/Solar Config) then solar must be off in order for the heater to fire. The easiest way to force solar off is to go to the Settings Menu/Pool Solar & Spa Solar and temporarily lower the temperature settings below the current water temperature.

2. Check that the heater is running. If not, then check:
   - Power is supplied to the heater.
   - The Pro Logic control output is properly connected to the heater control (see “Heater Control” wiring, page 14).
   - Some heaters also have internal switches or jumpers that have to be set correctly for remote control operation—refer to the heater manual and also “Heater Control” (page 14).
   - Heater is turned on (“Kill Switch” is in the “ON” position).
   - If a heater bypass valve is installed, check that water is flowing through the heater.
   - The heater temperature setting is set as high as possible (usually 104°F/40°C). Also note that some heat pumps actually have be set to the lowest possible temperature.

3. Once the heater is running, you can verify the “heater cooldown” feature (optional - see Configuration Menu/Heater Config.) is operating properly:
   - Press the “Filter” button once (for 2 speed pumps, this may require 2 pushes of the “Filter” button).
   - The heater should turn off (“Heater” LED off) and the “Filter” LED will flash to indicated heater cooldown is active.
   - The display will periodically indicate that the filter pump is on for heater cooldown and show the minutes remaining.
   - The pump will automatically turn off at the end of the 5 minute heater cooldown period.

For more detailed instructions on control and operation of the Pro Logic system, refer to the Operation Manual.

Service Mode

Service mode disables all automatic control operation and is intended to be used when servicing the pool system. To enter service mode, push the SERVICE button once on the main unit keypad. This will initially turn all outputs off and then allow you to turn outputs on/off manually at the main display (only). In service mode, the buttons on the optional remote display/keypad and the optional spa side remote will turn outputs off, but will not turn any output on. Heater control outputs and solar control outputs are prevented from turning on if the water temperature exceeds 104°F (40°C).

Pushing the SERVICE button again will enter a timed service mode. Service operation as described above will continue for 3 hours, then automatically return to normal operation.

Push the SERVICE button once more to exit out of Service mode.

IMPORTANT SAFETY INSTRUCTIONS

When using this electrical equipment, basic safety precautions should always be followed, including the following:

- **READ AND FOLLOW ALL INSTRUCTIONS**
- **WARNING**: Disconnect all AC power during installation.
- **WARNING**: Water in excess of 100 degrees Fahrenheit may be hazardous to your health.
- **WARNING**: To reduce the risk of injury, do not permit children to use this product unless they are closely supervised at all times.
- A green colored terminal marked “Earth Ground” is located inside the wiring compartment. To reduce the risk of electric shock, this terminal must be connected to the grounding means provided in the electric supply service panel with a continuous copper wire equivalent in size to the circuit conductors supplying the equipment.
- One bonding lug for US models (two for Canadian models) is provided on the equipment grounding bus with copper conductors not smaller than 8 AWG US / 6 AWG Canada.
- All field installed metal components such as rails, ladders, drains, or other similar hardware within 3 meters of the pool, spa or hot tub shall be bonded to the equipment grounding bus with copper conductors not smaller than 8 AWG US / 6 AWG Canada.
- **SAVE THESE INSTRUCTIONS**

**WARRANTY EXCLUSIONS**

1. Material supplied or workmanship performed by others in process of installation.
2. Damage resulting from improper installation including installation on pools larger than the product rating.
3. Problems resulting from failure to operate the product(s) in accordance with the recommendations in the product’s owner's manual(s).
4. Problems resulting from failure to maintain pool water chemistry in accordance with the recommendations in the owners manual(s).
5. Problems resulting from tampering, accident, abuse, negligence, unauthorized repairs or alterations, fire, flood, lightning, freezing, external water, degradation of natural stone used in or immediately adjacent to a pool or spa, or acts of God.
6. Problems resulting from the requirements of local codes or ordinances.
7. Problems resulting from failure to protect equipment from freezing.
8. Problems resulting from failure to deal with water contamination from outside the pool enclosure.
9. Problems resulting from failure to use products intended for the pool unless they are closely supervised at all times.
10. Problems resulting from the requirements of local codes or ordinances.

**DISCLAIMER**

The EXPRESS LIMITED WARRANTY ABOVE CONSTITUTES THE ENTIRE WARRANTY OF GOLDLINE WITH RESPECT TO ITS POOL AUTOMATION AND CHLORINATION PRODUCTS AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE. NO EVENT SHALL GOLDLINE BE RESPONSIBLE FOR ANY CONSEQUENTIAL, SPECIAL OR INCIDENTAL DAMAGES OF ANY NATURE WHATSOEVER, INCLUDING, BUT NOT LIMITED TO, PERSONAL INJURY, PROPERTY DAMAGE, DAMAGE TO OR LOSS OF EQUIPMENT, LOST PROFITS OR REVENUE, COSTS OF RENTING REPLACEMENTS, AND OTHER ADDITIONAL EXPENSES, EVEN IF THE SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SOME STATES Do NOT ALLOW THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

NO WHOLESALER, AGENT, DEALER, CONTRACTOR OR OTHER PERSON IS AUTHORIZED TO GIVE ANY WARRANTY ON BEHALF OF GOLDLINE.

THIS WARRANTY IS VOID IF THE PRODUCT HAS BEEN ALTERED IN ANY WAY AFTER LEAVING THE FACTORY.
